Q.: How will users know which Internet services to ask for, once their only interface is the way they speak?

Voice Internet is the end of visual search.

Normal people recall on average less than 3,7 brands only.¹⁾

Are you sure they know you name?

1) The Smartphone Generation Gap: Over 55? There is no app for that Deloitte

END OF TEXT INTERNET

Voice Search puts a serious threat into the heart of Google's search business.

[Business Insider](#)

"ZERO" UI

With voice, navigation becomes invisible - users need to know what to ask for.

[O'Reilly Media](#)

IOT IS BABYLON

Nobody but a startup: Why the Internet of Things might never speak a common language.

[Fast Company](#)

Voice Internet is the end of 9 in 10 technology brands

They will first be unseen, and then unheard of

Problem

5

There is no unified language for Voice Internet

Hey Alexa!, Hey Google!, Hey Siri! - can't we come up with better names for IoT?

"Hey Siri!"

"Alexa!"

WHOELSE?
QUIÉN MÁS?
还有谁?
QUI D'AUTRE?
WER NOCH?
KTO EЩЕ?

FOOD-SHARING who else?
EVENT who else?
JOB XYZ who else?
STARTUP who else?
UNIVERSITY who else?
PHONE REPAIR who else?
CYCLE CURRIER who else?
DELIVERY who else?
MOVERS who else?
ACCELERATORS who else?
PHOTOGRAPHER who else?

AIs are proprietary data silos: Amazon & Apple currently dictate with their APIs the Voice Interfaces market. IoT OEMs pay license fees whilst losing access to their consumer's data.

No data standardization between AIs: What hypertext was for Text Internet, is needed for Voice Internet; a markup language for the relationships and links in speech-based AI interfaces.

AI means unfair IoT competition: Brands not owning the consumer touchpoint, will die. Language is the most exclusive namespace available. The way consumers speak already, decides who wins the Internet of Voice.

Voice Internet will disrupt how consumers think and talk about (i) e-commerce, social networks and discovery, (ii) access on-demand services and IoT, and (iii) use online search at large.

Solution

6

The oldest challenge of technology marketing: Be verb!

who else? is the design of a better name for Als

**YOU SHOULD TWEET THAT!
LET ME GOOGLE IT!
I'M GOING TO BING HIM!
THAT MOMENT IS INSTAGRAMMABLE!
I'M GOING TO TUMBLE THAT!
DO YOU WANT TO SKYPE?
YOU SHOULD FACEBOOK THAT!
I'M GOING TO PHOTOSHOP YOUR PHOTO!**

**WHO ELSE?
QUIÉN MÁS?
还有谁?
QUI D'AUTRE?
WER NOCH?
KTO EЩЕ?**

One brand to remember every online service based on Noam Chomsky's theory of hard-wired Universal Grammar:
Who else? Wer noch? Quién más? (..)

who else? Voice Internet Blockchain

A namespace for Voice Internet applications in simple language: who else?

The who else?™ namespace connects IoT devices, AIs agents & users in an open source protocol, accessible through the who else? browser and via 3rd party IoT & AI integrations in the blockchain.

Who else?

Design Schema for
Voice Internet

Verbal Input

- "Hey Siri, who is into Tennis and available tomorrow afternoon!"
- "Hey Bosch Fridge, I want to go by car from here to SFO!"
- "Hey Alarm System, I want to know if the children already at home!"
- "Hey Mercedes, I want to drive with you!"

Namespace Schema Encoding Convention

- Tennis Central San Mateo Tuesday 14-18h who else?
- Rideshare from San Mateo to San Francisco who else?
- Who else is registered in the building at 123 5th Street?
- Who else can rent Mercedes 350?

who else? Voice Internet API

IoT vendors connect voice interfaces to an unified address service network

who else? is an open source IoT API enabling to connect services with a namespace for Voice Internet

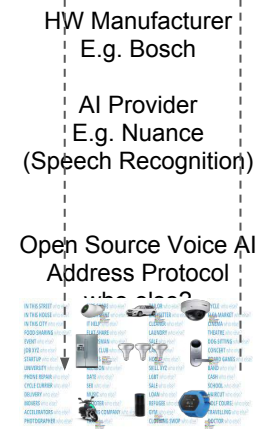

OLD: Proprietary Voice Internet

= HW manufacturer sole outlets for GAFA

New: Open Source who else? Voice Internet

= HW build Voice Internet as business case partners

If data (Voice) is the new oil, why do we allow only Alexa, Google & Apple to dig it?

This unified grammar between machines and humans (..) as a common language between AI and their users (..) could be *the* missing link between artificial and natural cognitive intelligence.

Full interview and research access available on request

50+ blockchain-based services in 1 interface: The simplest Internet browser ever

To speed up B2B adoption, we launch the who else? Marketplace during an ICO:

∞

IoT Devices

Distribution incentive:

0,5-5% revenue share for OEMs

Market Opportunity

who else? addresses a unique problem: Horizontal integration of Voice Internet

A reference design for language-based smart mobility, intelligent living and connected cities.

On-Demand & E-Commerce

IoT Manufacturer

Lifestyle, Dating & Communities

New incumbent developed previously unregulated markets (e.g. UBER, AirBnB).

Consumers are getting increasingly used to on-demand commerce and are willing to explore new verticals.

Apple (MFi), Amazon (Alexa) and Google (Android) are dominating / controlling the consumer touchpoints.

IoT manufacturer must fear an oligopol and be locked out.

Facebook and Twitter reached maximum utilization / growth potential.

The concept of horizontal discovery (c.f. Reddit) is increasingly requested by consumers.

Product (1/2)

12

A self-explaining Voice Internet brand available as open source protocol

Who else? will be No. 1 Voice Internet query: Because users can guess by their own imagination and the commonality of language, what else they can ask for using "who else?" grammar.

Old: People had to learn brands

New: People can anticipate by brand commonality

WHOELSE?
QUIENMÁS?
还有谁?

WER NOCH?
KTO EЩЕ?

- Apartment who else?
- Date who else?"
- Parking space who else?
- Food delivery who else?
- Nursing who else?

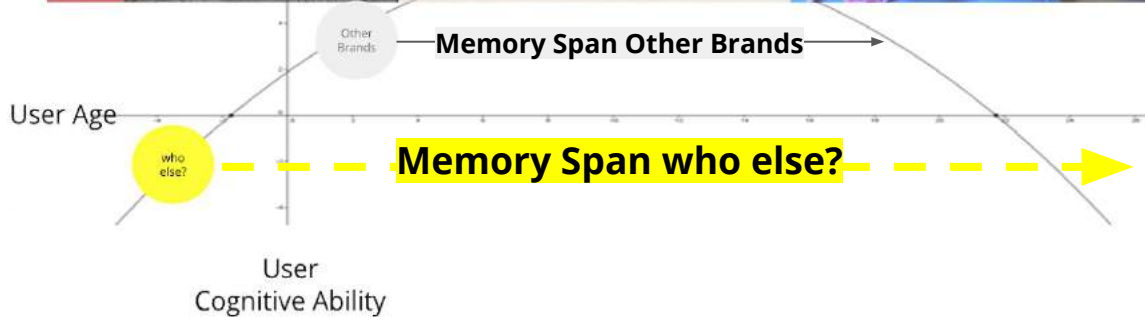

Available as Open Source AI at our IoT partners and as Open Source Browser.

...a Voice Internet brand in a childlike language: who else?

WHO ELSE?
QUIÈN MÀS?
还有谁?
QUI D'AUTRE?
WER NOCH?
KTO EЩЕ?

What people notice:

- Users of all ages remember it 🍷
- Easy to learn, in every language 🗣️ 🇬🇧
- People love to play with it it ❤️

The real science:

who else? is based on a semantic “hard-wired” in human language: Chomsky's Universal Grammar.

who else? is a brand with guaranteed lifelong user memorability by simplicity

The science of hard-wired language

14

who else? is a new proof of Chomsky's Universal Grammar

UG is a theory of language in the human brain, that is naturally hard-wired, so everybody recalls, interprets and augments it:

“Universal grammar (UG) in linguistics, is the theory of the genetic component of the language faculty, usually credited to Noam Chomsky. The basic postulate of UG is that a certain set of structural rules are innate to humans, independent of sensory experience. With more linguistic stimuli received in the course of psychological development, children then adopt specific syntactic rules that conform to UG.”

* Universal Grammar describes semantic components that structure how humans communicate and thus are being recalled, recognized and remembered by everybody.

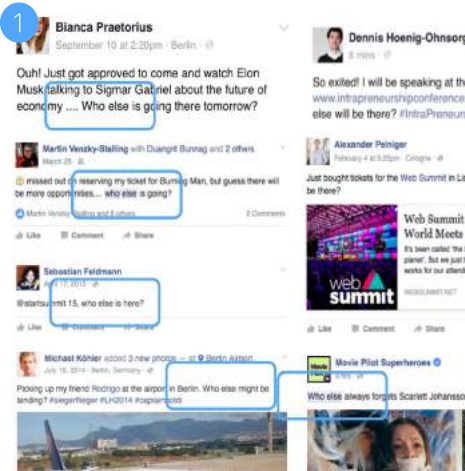

* [The last proof of Universal Grammar was awarded with an alternative “IG” Nobel Prize to Max-Planck Researcher in 2015.](#)

* Using the same research methods, we proved that “who else?” exhibits strong UG characteristics and can be considered “hard-wired”: A brand everybody responds to.. who else?

Market Validation (1/3)

15

who else? is how people speak in/about/with Internet services

No. Google Search Results

2

(1) Users query their friends asking "who else?" in social networks.

(2) "who else?" is one of the most common semantic concepts used across Internet services measured by Google Search Results.

Market Validation (3/3)

17

who else? = the verbal “cognitive” representation how people recall online services

Ray Kurzweil’s Pyramid of Cognitive Reception

How does the human mind represent information?

Language is the file-system of the human mind:

who else? likely is the the semantic concept by which people verbally remember the interaction they experience in online services.

By its commonality who else? is faster learned and more natural recalled than every other brand representing digital service concepts.

This makes who else? a brand designed for natural “hard-wired” voice usability and cognitive virality.

Protocol Schema (1/2)

who else? is a more logic Internet of Voice brand

The most simple, yet organized and nice way to query speech-based interfaces

1

"Hey Alexa, I want to travel from Berlin to Hamburg with a ride-share. Can you find a ride today?"

EN	Carsharing	Berlin	Hamburg	07-05-2017	who else	?
FR	Partage de voiture	Berlin	Hamburf	07-05-2017	qui d'autre	?
CN	Qiche gongxiang	Beilin	Hmbao	07-05-2017	shui hai	?

"I am looking for a room to stay in London next week, for 2 people, to stay 7 days, I pay upto 500 Euro"

EN	Apartment	London	01-05-2017	07-05-2017	2 adults	500 €	who else	?
ES	Apartmento	Londres	01-05-2017	07-05-2017	2 adultos	500 €	quién más	?
DE	Wohnung	London	01-05-2017	07-05-2017	2 Erwachsene	500 €	wer noch	?

2

Usability

A ↑ "Door, who else?"
"Who else can open this door?"
"Apartment, who else?"

B ↘ "Siri, open that door!"
"Siri, rent this apartment!"
"Siri, Airbnb this apartment!"

C ↓ "Door, open!"
"Apartment, renting now!"
"Sesame, open!"

3

Hey Siri, I need a Taxi here.
t = 2.4 seconds

vs.

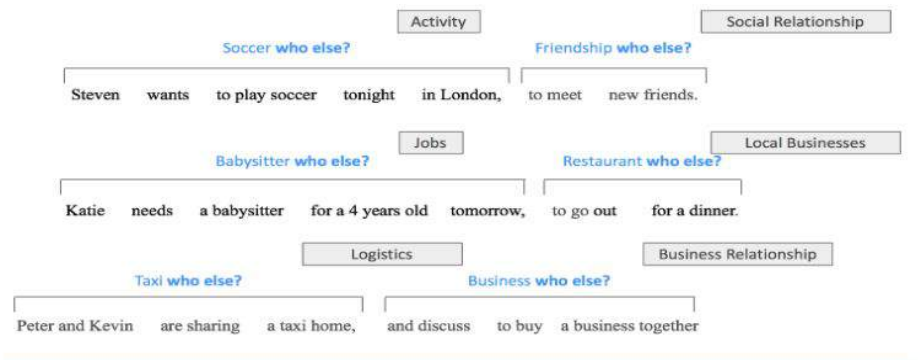

Taxi who else?
t = 0.8 seconds

(1) who else? grammar encodes verbal communication across different languages. (2) who else? is the most logical way for users to speak with devices they don't know yet. (3) who else? is the most shortest, yet semantically correct way to speak with an AI explicitly correct.

Protocol Schema (2/2)

who else? enables to reduce language to a simplified intend model in AIs

Mobile namespace access application and web API bridge / gateway development, Implementation of "Text Internet" version of who else? experience

ICO Consortium Setup | Begin pre-sale of who else? Namespace Tokens to Industry Partner Business development with Industry 4.0 integration partners as presale investors in the who else? consortium

Industry POCs
who else? Namespace IoT Integrations
Implementation of consumer-facing open source POC who else? namespace integrations.

- Mobility (Car-/Ride-Sharing)
- Energy (Energy Management)
- Smart Home (Security)
- Smart City (City-wide Interfaces)

Namespace 1.0 Release I
who else? Interface Specifications & Compiler API
Announcement of the audited protocol design and design specifications, implementation of an open source Voice Internet compiler

Payment API
who else? Financial Service Integrations
Implementation of payment functionality as first 3rd party enabled AI processor integrations as required for the launch as consumer product

ICO Sale
who else? Public Token Offering & Marketplace Launch

- Announcement who else? ICO with industry partners
- Release of consumer-facing who else? marketplace applications
- Beginn crowd-sale of who else? Namespace Tokens
- Publication who else? coding and markup language schema
- Public launch of consumer verticals on the marketplace

Budget Allocation %

Voice Internet is a \$ 55bn market opportunity

who else? is a winner takes it all brand, designed for verbal virality

- **who else? is an open source brand for Voice Internet applications:** Distributed with blockchain technologies who else? creates the first address namespace protocol for language-based AI application.
- who else? will be available in Q4/2018 as open source **who else? Blockchain:** Market adoption will be facilitated by (i) the open source **who else? Namespace Reference Design** for Voice Internet IoT interfaces, (ii) the first open source **who else? Voice Internet Compiler**, and (iii) the open source **who else? Namespace Browser**.
- **In POCs with Industry 4.0 and IOT OEMs the capabilities of the who else? protocol will be extended until the initial public offering Q1/2019.**
2 POCs are in final negotiation (total budget: € 100k).

We are raising \$ 4m for (i) legal implementation of the who else? ICO, (ii) release of the who else? browser and (iii) extension of the business development with potential high-volume industrys 4.0 OEMs as who else? Partners, and crowd-sale pre-investors.
